In 2015, only two years after Adobe Systems purchased the company for $3.9 billion, AutoCAD Product Key revenue and that of its companion products were only $50 million and $225 million respectively. While the acquisition of Autodesk was said to strengthen Adobe's presence in the CAD and design software markets, the financial success of AutoCAD and its future viability is still an open question. In fact, AutoCAD sales are declining steadily. A major factor behind this is the fact that it was developed more than a quarter century ago when computer performance was significantly weaker than today. Also, autodesk does not have a large development team, unlike rivals like SolidWorks. This problem will become even more acute in the coming years as the company tries to grow the software business and keep customers from switching to other vendors. While software companies are fighting for survival against stiff competition from Amazon, Uber, Google and Samsung, Autodesk is facing a much bigger problem: The global decline of the CAD industry. This was true before the advent of smartphones and tablets, but it is even truer now. According to Wainwright Research, a market research firm, global sales of CAD software dropped 18% in 2015 and are expected to fall another 10% in 2016. The declining trend will be driven by the growing popularity of mobile and web applications. The market share of desktop applications has already peaked, but the growth of smartphones and tablets has resulted in declining sales of the desktop apps. As a result of the rapid rise of smartphone and tablet usage, Autodesk is planning to pull the plug on its Web-based AutoCAD and Revit software. Autodesk's response to these declining trends is to continue focusing on mobile and web applications, while it is increasing the development of its software suite on the cloud. This strategy will be hard to implement because the company does not have a dedicated mobile development team. Instead, it has contracted out the development of mobile CAD software to a Chinese company. And it will take the company much more time to develop cloud-based applications than a traditional desktop app. The company plans to release its first cloud-based product in early 2019. But that will not stop it from developing more traditional desktop applications in the future. It seems clear that Autodesk has to find some way to improve the performance of its software.
